_____ we are going to answer to the question.

THE SECOND TEST CASE

A computer can be used to simulate the behavior of a system. In fact, simulation is a process by which the behavior of a system is modeled. The computer is used to simulate the behavior of a system. The computer is used to simulate the behavior of a system.

There are two types of simulation: static and dynamic. Static simulation is a type of simulation in which the system is modeled at a single point in time. Dynamic simulation is a type of simulation in which the system is modeled over a period of time.

THE FIRST TEST CASE

The simulation of the behavior of a system can be used to test the system. In fact, simulation is a process by which the behavior of a system is modeled. The computer is used to simulate the behavior of a system. The computer is used to simulate the behavior of a system.

There are two types of simulation: static and dynamic. Static simulation is a type of simulation in which the system is modeled at a single point in time. Dynamic simulation is a type of simulation in which the system is modeled over a period of time.

THE FIRST TEST CASE

THE FIRST TEST CASE

THE FIRST TEST CASE

I am interested in the behavior of a system. In fact, simulation is a process by which the behavior of a system is modeled. The computer is used to simulate the behavior of a system. The computer is used to simulate the behavior of a system.
